

Applications:

- Landscaping
- Farming
- Tree nurseries
- Grinding vegetation
- Deep grinding - 200–300 mm
- Grinding heavy clay
- Plant bed preparation
- Stump grinding in orchards.

Technical Description:

The **AHWI RFL700 Rotavator** is designed for tractors with three point linkages and PTO power from 100 to 150 hp. The rotor is driven mechanically on two sides via power belts and a divider gearbox. Rotavating depth can be adjusted by the lifting gear and hydraulic top link. The rotor is equipped with carbide-tipped tools. All wearing parts are attached by bolts and are easy to exchange.

AHWI Rotavators are ideal for grinding plant rows in nurseries, as well as mixing soil additives into the ground. All models feature a 2000 mm working width. Working depths of up to 300 mm enable excellent soil cultivation.

AHWI rotavators require a tractor fitted with a creeper gear in order to guarantee optimum performance.

Accessories:

Post compacting roller.

Technical Data:

PTO Power	75–112 kW	100–150 hp
Working width	2000 mm	
Rotor diameter	700 mm	
No of tools	48	
Working depth	up to 300 mm	
Weight	2450 kg
