

SF/H Series Stump Grinder

SF600H
SF900H
SF1100H

Applications:

- Forestry
- Tree nurseries
- Landscaping
- Plantations
- Site preparation

Functions:

- Economic and efficient grinding of all types of stumps
- Grinding stumps in a large radius (determined by excavator boom)
- Stump grinding in orchards, parks and gardens.

Technical Description:

The AHWI SF/H Series Stump Grinders are boom-mounted attachments for excavators and cranes. The grinding wheel is driven hydraulically, oil flow being provided from the carrier.

Different oil motors are available to ensure the correct motor speed dependent on the available oil flow.

The wheel is tipped with tungsten carbide grinding tools, which enable the stump grinder to work the stump both radially and laterally.

The tools are easy to access and can be replaced individually. The splashguard can be adjusted hydraulically.

Options:

Different mounting plates, rotating adapter.

Technical Data:

	SF600H	SF900H	SF1100H
Rotor diameter	600 mm	900 mm	1100 mm
Weight	310 kg	730 kg	1380 kg
Hydraulic motor capacity	40 cc	110 cc	150 cc

Contact your AHWI distributor for information on how to select the best SF/H stumpgrinder to suit your carrier's hydraulic system.
