

UZM700 Forestry Mulcher

Applications:

- Forestry
- Land Clearing
- Site preparation
- Composting

Functions:

- Slash reduction
- Tree stump cutting
- Processing material with no limit in size
- Commercial land clearing
- Grinding standing trees
- Recreating trails
- Clearing seismic lines in the oil and gas industries
- Commercial grinding in plantations
- Soil preparation for new growth.

Auto belt tensioning

Technical Description:

The **AHWI UZM700 Forestry Mulcher** is a heavy duty three-point linkage attachment specifically designed for large tractors including the AHWI RT400. The main driveline distributes the power over two cardan shafts to the drive shafts on both sides. The rotor is driven by power belts on two sides, which are fitted with automatic tensioning idlers.

The rotor is tipped with individual, interchangeable carbide fixed hammers.

A hydraulically operated protection flap ensures the best possible after-grinding of mulched material.

The patented synchronization control of the gearbox (supplied as standard) guarantees optimal alignment of the drive shaft at maximum stroke of the mulcher.

Accessories:

Third counter blade with wearing teeth, skids for deep grinding, gearbox cooling for tropical conditions, skids for deeper working.

Options:

Hydraulic rotor drive.

Technical Data:

Tractor power	298 kW	400 hp
Working width standard	2300 mm	
Overall width	2770 mm	
Rotor diameter	700 mm	
Drive speed	1000-1300 rev/min	
Weight	approx. 4200 kg	

FOUR tool choices to match your grinding requirements

Double carbide

Stone tool

Single carbide

Chipper knife
